------------------------------------	----

## Infection prevention starts with clean hands

Hand hygiene is one of the most important practices available to reduce the spread of infectious agents in the healthcare setting. It is a critical component of Standard Precautions that includes both hand washing with plain or antiseptic-containing soap and water, and/or the use of alcohol-based hand sanitizing products (gels, rinses, foams) that do not require use of water. In the absence of visible soiling of hands, approved alcohol-based products for hand disinfection are preferred over antimicrobial or plain soap and water because of their superior microbicidal activity, reduced drying of the skin and convenience.<sup>1</sup>

### When to practice hand hygiene<sup>2</sup>

#### 1. BEFORE TOUCHING A PATIENT

**WHEN?** Clean your hands before touching a patient when approaching him/her.  
**WHY?** To protect the patient against harmful germs carried on your hands.

#### 2. BEFORE CLEAN/ASEPTIC PROCEDURE

**WHEN?** Clean your hands immediately before performing a clean/aseptic procedure.  
**WHY?** To protect the patient against harmful germs, including the patient's own, from entering his/her body.

#### 3. AFTER BODY FLUID EXPOSURE RISK

**WHEN?** Clean your hands immediately after an exposure risk to body fluids (and after glove removal).  
**WHY?** To protect yourself and the health-care environment from harmful patient germs.

#### 4. AFTER TOUCHING A PATIENT

**WHEN?** Clean your hands after touching a patient and her/his immediate surroundings, when leaving the patient's side.  
**WHY?** To protect yourself and the health-care environment from harmful patient germs.

#### 5. AFTER TOUCHING PATIENT SURROUNDINGS

**WHEN?** Clean your hands after touching any object or furniture in the patient's immediate surroundings, when leaving — even if the patient has not been touched.  
**WHY?** To protect yourself and the health-care environment from harmful patient germs.

### Looking for more information on infection prevention?

We've created [UPrevent.mckesson.com](http://UPrevent.mckesson.com) with you in mind. We've collected the latest infection prevention resources and recommendations from leading authorities to help you stay up-to-date on current guidelines.

### UPrevent is your "hub" for all things infection prevention:

- **Current infection prevention guidelines and regulations** from the CDC, HICPAC, OSHA, WHO, APIC, CMS, The Joint Commission, and other governing organizations, updated regularly with current information
- **Sections grouped by infection prevention topic** so you know exactly where to look for pertinent materials
- Infection prevention event announcements on where to **find in-depth educational training industry-wide**
- Resources arranged logically to **guide your infection prevention search:** guidelines, forms/checklists, staff and patient education materials, training modules and educational presentations

You have the power to be an infection preventionist and we are here to help. Contact your McKesson Medical-Surgical Account Manager or visit [UPrevent.mckesson.com](http://UPrevent.mckesson.com) for more details.

# SOAPS

McKesson hand soaps are available in multiple size offerings and dispensing methods suitable for a variety of settings. The antibacterial formulations help provide effective infection prevention by protecting against cross-contamination and inhibiting bacterial growth. Our new foaming soap lathers richly to thoroughly clean hands. Our Herbal and Fresh Scent hand soap formulas include Aloe Vera, promoting moisture retention and softer skin, even with repeated use.

## McKesson Foaming Antibacterial Soap

- Contains benzethonium chloride to decrease bacteria on the skin
- Gentle formulation cleans and moisturizes hands
