

Tracheostomy Care Product Guide

Essential products for effective airway clearance.

**Clear the
way to
better care**

Meeting all your airway management needs

Patients with artificial airways and tracheostomies are at high risk for airway obstruction, impaired ventilation and infection. Skilled bedside nursing care can help prevent these complications.¹

We can support clinicians with a comprehensive portfolio of suction catheters in a wide range of designs, sizes and kit configurations. We also offer a variety of tracheostomy care and cleaning trays to satisfy clinician preference and simplify supply management.

Customize your trays for maximum efficiency

Save time, reduce waste and stretch your budget dollars.

Leverage stock kits and trays

Streamline supply management and ordering. Stock kits and trays provide single-item convenience and best practice standardization.

Reduce costs

As the #1 supplier of custom trays, we manage the entire supply chain—from sourcing and manufacturing to warehousing and distribution. This means stability and lower prices for our customers.

Contro-Vac valve helps reduce risk of infection

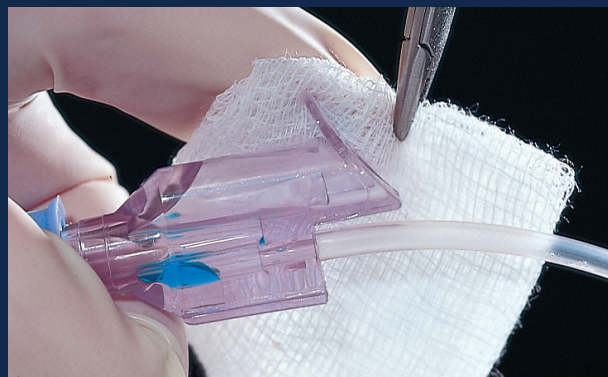

Better design drives better performance

All of our tracheal suction catheters feature our exclusive Contro-Vac valve to help reduce the risk of infection, airway trauma and patient discomfort.

With its 5-in-1 connector and stabilizing bar, the Contro-Vac valve connects easily and securely to any size tubing. Forward placement of the valve reduces risk of cross-contamination from fluids.

Proven to deliver enhanced protection

Independent testing compared Medline's Contro-Vac valve to the leading catheter's chimney valve. Contro-Vac was more effective at preventing the release of contaminants during suctioning.²
