

# Absorbent products for bariatric individuals

Heavier superabsorbent protective garments for larger patients and residents.

Studies show there is an increasing correlation between obese individuals and urinary incontinence.<sup>1</sup> With the prevalence of U.S. adult obesity at 42% and growing,<sup>2</sup> the need for quality incontinence products has never been greater. That's why we developed a comprehensive line of adult bariatric incontinence products to address the needs of this growing patient and resident population.
