

# OR Necessities

Sterile products for your surgical suite.

**Improve  
efficiency**

# Operationalize your OR with commodity items that ensure quality and savings.

Your OR is unlike any other surgical suite. So are your product needs.

At Medline, we work with you to make sure your team has the right products, from pre-op through post-op care.

Whether you're choosing a single item or tackling all your OR accessory needs.

## We help you drive results in four critical areas:

### Improve patient and staff safety

Our experts help you comply with national safety initiatives, including increasing the use of sharps safety items.

### Receive one-on-one support

No two ORs are the same. Our dedicated team has real-world perioperative experience—always listening and ready to respond to your individual needs.

### Increase standardization and efficiency

Our specialists work side-by-side with your team to improve care consistency and identify redundancies. We provide a detailed assessment of the items on your shelves and in your packs. The result is easier access to replacement components and additional items.

### Contain costs

Gain further compliance and reduced pricing by accessing our OR accessories on most common GPO contracts.
