

Silver antimicrobial wound gel

McKesson silver antimicrobial wound gel is an opaque, amorphous hydrogel containing a high (>80%) water content and water-soluble polymer chains. This formulation increases the moisture within the wound through water donation which makes the gel effective in assisting the debridement and desloughing process in dry necrotic wounds, while maintaining a moist wound environment for optimal wound healing. McKesson silver antimicrobial wound gel contains an antimicrobial silver compound (silver carbonate) that is an effective barrier to bacterial penetration by inhibiting the growth of broad spectrum of microorganisms which come into contact with the gel. The nominal silver content is 0.11% (1100µg/gram).

In-vitro testing has shown that silver antimicrobial wound gel is effective against the following broad spectrum of microorganisms; *Staphylococcus aureus*, including MRSA, *Staphylococcus epidermidis*, including MRSE, *Streptococcus pyogenes*, *Pseudomonas aeruginosa*, *Escherichia coli* and fungi such as *Candida albicans* and *Aspergillus brasiliensis* when they come into contact with the gel. The clinical implications of the *in-vitro* findings are unknown.

Features and benefits

- Water-based gel with silver for use in wound healing
- Nominal silver content: 0.11% (1100µg/gram)
- Helps maintain a moist wound environment by donating moisture
- For the management of dry to moderate exuding partial and full thickness wounds such as: pressure ulcers, leg ulcers, diabetic ulcers, graft and donor sites, post-operative surgical wounds, trauma wounds, first and second-degree burns, abrasions and lacerations
- Provides protection against a range of bacteria and fungi
- Individually packaged 1.575 oz (45 g) tubes
- For convenient single patient use
- Store at 59-77°F (15-25°C)
- Not made with natural latex
