

## Anesthesia mask

McKesson anesthesia masks are used to deliver O<sub>2</sub>, N<sub>2</sub>O-O<sub>2</sub>, and/or other inhalation anesthetics before, during, and after the anesthetic procedure or during resuscitation. Masks are pliable with a contoured teardrop design to help ensure patient comfort and system efficacy. Requires low hand pressure to hold in place, enhancing clinician comfort by reducing hand and arm strain. Masks feature a soft, pliable, air-filled cushion that easily conforms to the face with a low-pressure, high-contact seal. The face plate is made of high-strength plastic. The connector fits the breathing circuit and resuscitation devices securely. Masks have an adjustable inflation valve on the cushion and feature removable hook rings that allow for the attachment of a head strap for hands-free usage.

### Features and benefits

- Soft, pliable air filled cushion
- Adjustable inflation valve
- Unique ergonomic shape fits all facial configurations for improved sealing capabilities
- Contoured design helps to eliminate the possibility of corneal abrasion
- Available in infant, pediatric, and adult sizes (small, medium, and large)
- Not made with natural rubber latex
